Vicky:

**Re: Water License N7L3- 1619 Compliance Review report 2000.**

As per the information in our files, the Water consumed in 2000 came to a total of 7,955,085 litres. The Water was delivered from the New Water Lake for 2000. The following are the water delivered by the twelve months in 2000.

January 2000	551,215 litres	July 2000	480,496 litres
February 2000	522,499 litres	August 2000	788,732 litres
March 2000	559,319 litres	September 2000	878,190 litres
April 2000	521,327 litres	October 2000	894,981 litres
May 2000	591,462 litres	November 2000	814,601 litres
June 2000	555,907 litres	December 2000	796,356 litres

As per the total water consumption report, we are assuming that the same amount of sewage discharged is approximately the same, being approximately 7,955,085 litres being pumped out from all Clients in the Community.

There was no abandonment of any site during 2000.

The work plan for 2001 is as follows;

1. To fix the added fencing that was installed in 2000 as the winds and bears took them down.
2. To cover the unused pits and level them off.
3. Compact and bury the full garbage pit.
4. Do follow up work on the sewage pit as is necessary.
5. Identify a dead animal pit area at the Sewage lake site.
6. Check the pump out chute at the water lake and make the necessary repairs
7. Send samples during the peak precipitation seasons from the SNP 1619-2 site.

The work plan has been identified from the ongoing deficiencies at the Sewage Lake and the New Water Lake sites.

Hoping that this report meets your requirements and if there are any questions or concerns, we can be reached at the above address.

Thank you for your attention to this report for 2000.

Signed,

Albert Ruben Sr., S.A.O.
